SUMMARY

Software engineer working with Java and TypeScript on checkout APIs and idempotency handling. Moved billing settlement from nightly batch to event-driven, cutting lag from 14 hours to under 5 minutes.

EXPERIENCE

Northwind Labs

Software Engineer

Austin, TX

Mar 2022 – Present

- Worked on the checkout service and its supporting APIs.
- Changed the billing pipeline from a nightly cron to an event-driven design, reducing settlement lag from 14 hours to under 5 minutes.
- Added retry and idempotency handling to the payments API, which brought duplicate charges down from roughly 40 a week to zero.

Harborview Analytics

Junior Developer

Remote

Jul 2020 – Feb 2022

- Built internal reporting tools in Python and SQL used by the 12-person operations team.

SKILLS

Technical: Java, TypeScript, Python, SQL, Git, idempotency, event-driven

EDUCATION

Riverton University

BSc in Computer Science

Riverton, TX , May 2020
